Due to a scheme called the "solar multiplier" you used to get twice the rebate for the first 1.5kW of any system, compared to subsequent kW's. So in terms of dollars per kW, a 1.5kW system represented the best value. However, all that has now changed. The "solar multiplier" which favoured 1.5kW solar systems is gone. But don't panic!

Inverter sizes are expressed in kW which is normally sized lower than the kWp of an array. This is because inverters are more efficient when working at their maximum power and most of the time the array is not at peak power. Using software like PV Sol takes in to account variations in different solar panels and local weather conditions.

Thus the nameplate rating of the inverter is its capacity to process the power of the PV array. For example, a 7.6 kW inverter can produce an output of up to 7.6 kW AC. A 9kW array is rarely a 9kW power producer. A 9 kW DC solar array rarely produces this much power. The chart below actually shows ~4500 operating hours for a standard solar ...
