To calculate the size of a battery bank I would suggest you consider the highest number of peak sun hours and multiply the number of peak sun hours by the rated wattage of your solar panel.

Can a 300 watt solar panel charge a 200 volt battery?

Yes, a 300w solar panel could charge a 200Ah battery. Assuming the battery is about 50% discharged, a 300w solar panel should recharge it within one day, provided it receives enough direct sunlight.

How much sunlight does a 300W solar panel Draw?

Let's say you get 1500W of sunlight from your 300W solar panel (ideal weather). A 125ah battery will draw 1500W for an hour. A 6.5ah battery is enough for 1500W for 30 minutes ($125 / 2 = 6.5$). You can slow the discharge rate by reducing the inverter load or drawing power for brief periods only.
