Not ideal, but a good start. Still, that 5000W at 48V spread across 6 FETs then drops to 17A per FET. Surge current per FET of 70% would then be 15.1kW. Hmmmm... The layout of the PCB, however, may not be able to ...

Sine Wave Inverter PCB Design. An actual-size, single-side PCB for the pure sine wave inverter circuit is shown below. A PCB for the sine wave inverter circuit. A suitable connector CON1 is provided on the PCB to connect the MOSFET banks and the transformer externally. Connector CON1 pins A through F are also marked on the schematic.

Actually, if you open a commercial 2000W inverter, you would see that it has 2 or maybe even 3 transformers and the rest of the board is the same. The IGBTs and the output coils and capacitors. Feel free to use my schematic, my PCB files and my tutorial to make the same project or even improve it. I'm quite satisfied with the results.

However, increasing the switching frequency leads to higher inverter losses. In traditional 48V silicon FET inverters, switching losses at 40kHz PWM can become dominant over conduction losses, generating excess heat that requires a larger heat sink, increasing system cost, weight, and size. ... The PCB includes mounting holes for an optional ...
