What is an off-grid AC-coupled system?

An off-grid AC-coupled system is a setup that uses bi-directional inverters coupled with one or more compatible solar inverters. These systems are generally more efficient during the day when there is high AC power demand, such as for air-conditioning systems, modern kitchen appliances, and pool pumps.

o DC-coupled systems charge the battery bank with DC power directly from the PV array. o AC-coupled systems convert DC power from the PV array to AC power, then convert this AC power back to DC power to charge the batteries. o Hybrid systems include multiple generation sources (e.g., a solar and back-up generator could be either DC-coupled, AC-coupled, or both).
