How do I safely use lithium-ion batteries?

Read and follow the guidelines in this document to safely use Lithium-Ion batteries and achieve the maximum battery life span. Do not leave batteries unused for extended periods of time, either in the product or in storage. When a battery has been unused for 6 months, check the charge status and charge or dispose of the battery as appropriate.

Are lithium-ion rechargeable batteries safe?

Lithium-Ion rechargeable batteries require routine maintenance and care in their use and handling. Read and follow the guidelines in this document to safely use Lithium-Ion batteries and achieve the maximum battery life span. Do not leave batteries unused for extended periods of time, either in the product or in storage.

Do lithium ion batteries degrade when not in use?

Lithium-ion batteries, when not in use, generally don't degrade significantly simply by sitting idle. The monthly SoH (State of Health) loss of a lithium-ion battery that is not undercharged, overcharged, or overheated is between 0.08 to 0.25%.

Do lithium batteries drain when not in use?

Yes, lithium batteries do drain when not in use, thanks to self-discharge. The rate of self-discharge depends on the battery's quality, age, and storage conditions. On average, lithium batteries lose about 2-3% of their charge per month when stored properly.

Can you put a Li-ion battery in a power tool?

Li-ion batteries are particularly susceptible to high temperature and hard shocks. Do not leave your batteries in a hot place, inside or outside the tool. Do not get it wet. Do not deep discharge your battery. If the power tool starts showing signs of weakening in power, charge it up or use a 2nd backup battery.

What happens if a lithium ion battery self-discharges?

As all batteries experience some degree of self-discharge, this phenomenon can be a concern for lithium-ion batteries as well, albeit at a much lower rate. When these batteries are stored for an exceptionally long time without being charged, the self-discharge could potentially cause the cell voltage to fall below 2.5 volts.
