What is the difference between lithium titanate and other lithium ion batteries?

However, there's a critical difference between lithium titanate and other lithium-ion batteries: the anode. Unlike other lithium-ion batteries -- LFP, NMC, LCO, LMO, and NCA batteries -- LTO batteries don't utilize graphite as the anode. Instead, their anode is made of lithium titanate oxide nanocrystals.

What are the advantages and disadvantages of lithium titanate battery?

Some of the main advantages of lithium titanate compared to the conventional Li-ion batteries include the faster charge and discharge rates, increased life cycle and energy storage, high endurance in extreme environmental and temperature conditions. The two leading companies in lithium titanate battery technology is Altairnano and Toshiba.

How long does a lithium titanate battery last?
