

What are energy storage and management technologies?

Energy storage and management technologies are key in the deployment and operation of electric vehicles (EVs). To keep up with continuous innovations in energy storage technologies, it is necessary to develop corresponding management strategies. In this Review, we discuss technological advances in energy storage management.

Why is energy storage management important for EVs?

We offer an overview of the technical challenges to solve and trends for better energy storage management of EVs. Energy storage management is essential for increasing the range and efficiency of electric vehicles (EVs), to increase their lifetime and to reduce their energy demands.

What are energy storage systems?

Energy storage systems are devices, such as batteries, that convert electrical energy into a form that can be stored and then converted back to electrical energy when needed, reducing or eliminating dependency on fossil fuels. Energy storage systems are central to the performance of EVs, affecting their driving range and energy efficiency.

What is energy management in hybrid vehicles?

Energy management strategies control the power flow between the ICE and other energy storage systems in hybrid vehicles. Energy management in HEVs and PHEVs minimizes the energy consumption of the powertrain while fulfilling the power demands of driving.

Can EV batteries be used as energy storage devices?

Batteries in EVs can serve as distributed energy storage devices via vehicle-to-grid (V2G) technology, which stores electricity and pushes it back to the power grid at peak times. Given the flexible charging and discharging profiles of EVs and the cost reduction, V2G has been considered for short-term power grid energy storage.

Can V2G be used for power grid energy storage?

Given the flexible charging and discharging profiles of EVs and the cost reduction, V2G has been considered for short-term power grid energy storage. For power grid integration, individual EVs typically do not meet the criteria to participate in power market transactions.
