Leveraging investments in renewables, distributed energy resources, and energy storage is key to improving the resiliency and security of Haiti's power system and electricity supply.

How does a lack of capacity affect the electricity sector in Haiti?

Since the MTPTC is the main government body in charge of the electricity sector, this lack of capacity affects directly the performance of the sector. In 2017, the World Bank invested a total of \$35 million to Haiti in order to improve access and expansion of renewable energy.

How many people in Haiti have electricity?

About 49% of the population of Haiti had access to electricity as of 2022. In rural areas, that number is closer to 2%, and while 80% of Haiti's urban areas have access to electricity, that access may not be reliable. "Even when a household is connected to the power grid, they might only have power for three to eight hours a day."

The largely government owned electricity sector in Haiti, referred to as "Électricité d'Haïti" (EDH for "Haiti Electric Utility", faced a deep crisis characterized by dramatic shortages and the lowest coverage of electricity in the Western Hemisphere in 2006.

How can agrivoltaic solutions improve energy production in Haiti?

Through research and stakeholder engagement, USAID and NREL published a framework to adapt agrivoltaic solutions for minigrid contexts in Haiti. These solutions aim to boost energy production, thereby addressing energy poverty, and increase agricultural yields, thereby addressing food insecurity.

Can off-grid solar improve Haiti's energy access?

In parallel with other efforts like minigrid development and national grid planning, off-grid solar also has the potential to play an important role in advancing Haiti's energy access. As the name suggests, off-grid solar systems operate independently from the traditional electricity grid.
