Due to the variable and intermittent nature of the output of renewable energy, this process may cause grid network stability problems. To smooth out the variations in the grid, electricity storage systems are needed [4], [5].The 2015 global electricity generation data are shown in Fig. 1.The operation of the traditional power grid is always in a dynamic balance ...

To support this, supercapacitor absorbs a transient power of 28 W and the battery power slowly decreases to 212 W. BLDCM again accelerates at  $t = 176.68$  s and goes to a higher speed thus increasing the load power demand to 229 W. Supercapacitor again supplies the transient power of 27.4 W and the battery power increases slowly up to a steady ...
