What is energy storage power station (EESS)?

The EESS is composed of battery, converter and control system. In order to meet the demand for large capacity, energy storage power stations use a large number of single batteries in series or in parallel, which makes it easy to cause thermal runaway of batteries, which poses a serious threat to the safety of energy storage power stations.

What happens if a battery does not have thermal storage protection?

Without chemical thermal storage protection, the temperature of the thermally runaway battery rises by 242 °C and the adjacent battery also triggers thermal runaway. At 60 s, the temperature of the adjacent battery rises to 700 °C (as shown in Fig. 17 d). Fig. 17.
