I think you seriously underestimate such a design. you need to deal with two things 1: charging a pack from the PV system. PV is essentially a current source. 2 : converting the pack to AC. a direct convertor is very difficult as you need to work from hugely varying input voltage. you are better off stabilizing this into a pack ST microelectronics has a sample design for such ...

A 60V inverter is a 60V nominal inverter, ie. its designed for 5 X 12V batteries, normally charged hot at 14V each = 70V. 60V24AH = 1.4Kwh, so you can run some lighting for a while, you would be suprised how large a pack you need for a house. Getting the energy back into the pack - well, solar panels would work nicely.
