What is the goal of connecting lithium batteries in series?

Lithium batteries are connected in series when the goal is to increase the nominal voltage rating of one individual lithium battery.

What is a lithium battery pack?

A lithium battery pack is a collection of individual lithium-ion or lithium-polymer cells grouped together to store and deliver electrical energy. These packs are widely used in applications such as electric vehicles, renewable energy systems, and portable electronics.

What happens if you connect two lithium batteries in series?

When you connect two 12.8V-100AH lithium batteries in series, they become a 25.6V-100AH battery bank with 2560 watts of stored energy potential to 100% DOD. Connecting batteries in series increases the battery bank voltage and total stored energy.

How are lithium batteries connected?

Lithium batteries are connected in parallel to achieve higher current ratings. This means that the positive terminals of the batteries are connected together, and the negative terminals are connected together.
