

Georgia rooftop solar power system

How much do solar panels cost in Georgia?

Solar panels will save you a lot of money over time, but the upfront costs aren't cheap. The average Georgia homeowner needs a 12.06 kW solar panel system to cover their electricity needs, which comes out to \$31,645 before incentives. Prices range from \$26,898 to \$36,392, but after the federal tax credit, that drops by 30%.

Is Georgia a good state to install solar panels?

With higher than average electricity prices and abundant sunshine, Georgia's a pretty great state for solar energy. It may not have the best local solar incentives, but as a Georgian, you can still take advantage of solar's most valuable incentive, the Federal Tax Credit. Here's what you should know about installing solar panels in the Peach State.

How much power does a solar panel produce per square foot?

Each year, solar panels get more and more efficient -- that is, they produce more power per square foot. As of 2024, the most popular solar panels can produce about 400 wattsof electricity when they're in full sunlight. If you want to make the most of your roof's solar potential, get panels with at least that much power output.

How do I choose a solar inverter for my roof?

If you want to make the most of your roof's solar potential, get panels with at least that much power output. You should also make sure to select a solar inverter setup that makes sense for your roof's layout. And if you want or need a solar battery, be sure to pick one that can integrate cleanly with that inverter.

How do I finance a solar panel system?

There are a few ways to finance your solar panel system so you don't have to provide all that money upfront. Cash purchase: You'll own the system and pay for it upfront. This provides the best long-term savings. Solar loan: Allows you to retain ownership of your system, while owing little to no money upfront.

Georgia Power, the electric utility with customers in 155 of Georgia's 159 counties, uses a net billing plan which compensates customers when their solar system sends electricity to the utility grid. The net billing rate was 8.5 cents per kWh in 2024. The credit is applied to your Georgia Power bill each month.

Rooftop solar systems are small-scale solar installations that allow people to generate carbon-free electricity, primarily for use on site. There is 4,566 megawatts of solar capacity currently installed in Georgia as of Q2 2022. Solar ...

Georgia enjoys abundant sunshine throughout the year, making it an ideal location for solar energy generation.
