What is the primary energy source for Guatemala?

In 2018, Guatemala derived 57.43% of its total energy supply from biofuels and waste. This was followed by oil (29.54%), coal (7.68%), hydro (3.22%), and other renewables such as wind and solar (2.12%).

What is the Guatemala energy profile?

With the purpose of facing the energy challenges of the future and securing a sustainable energy supply in Guatemala; the Science and Technology Research Facility (INCYT) at Rafael Landivar University, developed the Guatemala Energy Profile. The Guatemala Energy profile was developed in three main stages.

What is the role of MEM in Guatemala's energy sector?

MEM (Ministerio de Energía y Minas) is responsible for policy development, planning, and programming of all things related to the energy sector. A critical pillar for achieving Guatemala's goals is the reduction of deforestation.

How much electricity does Guatemala have?

As of 2020, Guatemala had 4110 MW of installed electrical capacity. This capacity is based primarily on hydro power (38.38%), fossil fuels (30.36%), and biomass (25.20%).

Is energy storage a good option for smart energy systems?

Lund et al. reviewed the energy storage of smart energy systems and found that it is a cheaper and more effective solution to integrate more fluctuating renewable energy such as wind energy and solar energy by using thermal energy and fuel storage technology than by relying on electric energy storage (Stergaard et al., 2016). 2.2.4.

What is a smart energy management system?

A smart energy management system integrates the energy generation systems, end users, distribution and storage systems and provides smart communication and optimal control strategies to create highly automated, responsive and flexible energy systems.

The optimal energy management of the smart building means obtain the best consumption of the load demand and the optimal scheduling coordination of the interconnected energy sources like diesel ...
