An uninterruptible power supply (UPS) is an electrical device that provides emergency power to the load in case of any input or major failure. UPS is different from auxiliary or emergency power systems or standby generators that provide short-term protection from input power outages by providing power stored in batteries and supercapacitors.

UPS stands for Uninterruptible Power Supply. A UPS system is an autonomous source of alternate power that is used to supply sensitive electronic loads such as computer centers, telephone exchanges and many industrial-process control and monitoring systems. These applications require power that is availability and of good quality.
