What is a hybrid inverter?

A hybrid inverter is essentially two inverters in one. It combines a solar inverter and a battery inverter into one simple unit. Hybrid inverters use solar energy to power your home, charge a battery, or send excess energy into the electricity grid. They also provide emergency backup power during a blackout.

Should I upgrade my off-grid inverter to a hybrid system?

If you need more power than your off-grid system can supply, you should strongly consider upgrading to a hybrid system that draws from the grid when necessary and can feed into the grid in surplus situations. Choosing an off-grid inverter should only be when there is no grid connection available.

How does an off-grid inverter work?

An off-grid inverter will draw power from a charged battery, convert the power from DC to AC, and output it into a household. It is essentially similar to a hybrid inverter, with one major difference: it cannot feedback power into the utility grid. A diagram depicting how an off-grid inverter fits into a more extensive solar system.

What can a hybrid inverter do with excess solar energy?

Hybrid inverters can send excess energy into the electricity grid or charge a battery. They are essentially two inverters in one; they combine a solar inverter and a battery inverter into one simple unit. These advanced inverters use solar energy to power your home and provide emergency backup power during a blackout.

Who makes the best off-grid inverter?

One of North America's leading manufacturers of off-grid power systems is Outback Power. Founded in 2001 by three power systems design engineers, they specialize in split-phase inverters.

What can off-grid inverters be used for?

Off-grid inverters can be used to build stand-alone power systems. They supply pure sign-wave AC power and can be used to build stand-alone power systems that can be either AC-coupled with solar inverters or DC-coupled with MPPT solar charge controllers.
