How do European households benefit from a shared electricity market?

Many European households have electricity plans that are linked to the current spot price, allowing them to benefit from hourly price variations. Most European countries are part of a shared electricity market, which is facilitated by extensive interconnections between national grids.

How much does electricity cost in a country?

The electricity price varies greatly from one country to the next ranging from 0.005 €/kWh in Turkmenistan to 0.34 €/kWh in Bermuda. In the UK, it reaches 0.266 €/kWh, above the international average of 0.125 €/kWh. In this article, we seek to establish a correlation between kWh price, market liberalization and power outages.

What is Europe's electricity market?

Europe's electricity market is characterized by a diverse array of energy sources. The main source of electricity across the continent varies by region, reflecting different geographical and economic factors. In many European countries, nuclear energy and natural gas are significant contributors to the electricity mix.

Why are European electricity prices so low?

Drop in cross-border flows from France - Europe's top exporter country - partially explains the price disparity. France has reduced power exports after the French TSO announced they would limit cross border exchange due to grid and transit flow issues. Such events underscore once more the importance of the EU internal electricity market.
