The built-in BMS controls the batteries. A home energy storage system operates by connecting the solar panels to an inverter, which then links to a battery energy storage system. When needed, the power supplied by the energy storage system is converted through an inverter, from AC to DC or vice versa.

Energy storage capacity for a residential energy storage system, typically in the form of a battery, is measured in kilowatt-hours (kWh). The storage capacity can range from as low as 1 kWh to over 10 kWh, though most households opt for a battery with around 10 kWh of storage capacity.

ESS are designed to complement solar PV systems and provide reliable and sustainable power. FusionSolar's ESS solutions are modular, scalable, and adaptable to different energy demands and applications.
