What is a C&I energy storage system?

A C&I (Commercial and Industrial) energy storage system is an energy storage solution designed for commercial and industrial applications, such as factories, office buildings, data centers, schools, and shopping centers.

What are energy storage solutions?

Our energy storage solutions are designed to ensure businesses will have power to meet their facility's critical power needs. For many companies the most significant portion of the electric bill are the demand charges which are based on the highest amount of power drawn during any 15-minute interval billing period.

What are the different types of C&I energy storage systems?

The main types of C&I energy storage systems include battery-based, thermal, mechanical, hydrogen energy storage, and supercapacitors. Battery-based systems are the most commonly used type of C&I energy storage systems. They store energy using electrochemical batteries such as lithium-ion, lead-acid, or flow batteries.

How do I choose a C&I energy storage system?

The choice of system depends on factors such as the facility's energy needs, available space, budget, and desired performance. The main types of C&I energy storage systems include battery-based, thermal, mechanical, hydrogen energy storage, and supercapacitors. Battery-based systems are the most commonly used type of C&I energy storage systems.

The integration of multiple storage technologies is anticipated to improve overall system performance and cost-effectiveness for commercial energy storage applications. Conclusion. Commercial energy storage systems are a crucial component of the modern energy landscape, offering numerous benefits to businesses and industries.
