How many kHz is a 230 volt inverter?

By the way it is 230VAC 50Hz. Most lightweight inverters first convert the low voltage to a DC high voltage (isolated). For a "true sine wave" it should be around 350VDC as the peak of 230VAC is about 325V. This voltage feeds a full bridge (at least 4 power switches required) and this full bridge is PWM modulated with about 20 kHz or higher.
