What is the capacity of a lithium battery?

Lithium battery capacity is typically measured in ampere-hours(Ah) or watt-hours (Wh), indicating the amount of charge it can hold. Common capacities vary based on application but range from small batteries at a few Ah to large storage batteries of several hundred Ah. What is the usable capacity of a lithium battery?

How much energy does a lithium ion battery use?

Lithium-ion batteries typically have an energy density of 150 to 250 watt-hours per kilogram, while lithium iron phosphate (LiFePO<sub>4</sub>) batteries are around 90-160 watt-hours per kilogram. How to check lithium battery capacity? Capacity can be tested using a multimeter or a battery analyzer that measures the discharge rate over time.

What is a high capacity lithium battery?
