Another problem with graphite as the anode material is its volume changes during charge/discharge cycles. Over time, this expansion/contraction irreversibly damages the battery cell's structure, limiting its lifespan.. Conversely, lithium ions going in and out of the anode's structure during charge and discharge has almost no effect on lithium titanate structures.

LTO battery(Li₄Ti₅O₁₂) is a lithium ion battery with lithium titanate as the anode. It has been widely used because of its high safety, high stability, excellent performance, long cycle life and environment friendly. It has the features of low self-discharge, high safety, long cycle life, wide operating temperature range, fast charge and discharge rate.
