What is a modular uninterruptible power supply (UPS) system?

Introducing the next generation of modular uninterruptible power supply (UPS) systems designed for ultimate availability, excellent performance, high efficiency, and ideally suited for medium-sized datacenters.

What is a modular UPS?

Modular UPS enable the power supply to be sized exactly to requirements, without precluding any future expansion. They are made up of "Standard" modules that can be added to existing configurations to increase their power or backup time. Their innovative modular system, provides the highest possible level of redundancy.

What is a 3 phase uninterruptible power supply?

Is a three phase uninterruptible power supply on line Double Conversion with 3 Level IGBT technology, PWM high frequency and with the possibility to be connected in parallel to have N+X redundancy up to total 6 units. Is a complete Scalable UPS System based on 250 kVA or 300 kVA power units and can reach up to 2.1 MVA nominal power.

What is a double conversion UPS?

On line double conversion UPS with DSP microprocessor for accurate and constant control of all measurements and input Power Factor Correction (PFC). Electronics without Output Transformerless (OTL) for the highest quality of the output voltage with an efficiency of up to 96%.

The DPA 250 S4 online double conversion modular uninterruptible power supply represents the latest technological innovation. This modular UPS is based on decentralized parallel architecture (DPA(TM)), where every UPS module is practically its own UPS, having all the essential functional units needed for independent operation.

Again, with very careful management, a modular UPS may be configured more closely than a larger, fixed-capacity system, and this might result in some long-term power savings. There are many "if", "could", and "may" in this scenario.
