

Monitoring Uninterruptible Power Supply in Australia

What is an uninterruptible power supply (UPS)?

An uninterruptible power supply (UPS) is a device that offers battery backup in the event the main electrical supply fails or drops. Smaller UPS systems deliver power for a few minutes or so - just enough time to save any important files and shut down the computer properly. Larger systems have enough power to last several hours.

Do you need an uninterruptible power supply?

We do all we can to protect our critical in the workplace, but have you thought about protecting your critical equipment? An Uninterruptible Power Supply (or UPS) does exactly that, protects your equipment if there is a power failure. In Australia we know how common blackouts and brownouts can be, especially during the summer.

What is ups monitoring?

UPS Monitoring is a system that monitors the different metrics of UPS devices including bypass mode, changeover, power, remaining battery, battery mode, frequency, ambient temperature, and more. With a monitoring system in place, you will be able to check the current performance of your UPS and send you alerts on critical.
