What is a user-side energy storage planning and operation simulation?

In the industrial and commercial user-side energy storage planning and operation simulation, the analysis will be based on the IEEE 30-node system, as shown in Figure 1. The electrical load on the industrial and commercial user side will also change with time. User load can be divided according to seasonal changes.

Do industrial and commercial users need distributed energy storage?

However, industrial and commercial users consume a large amount of electricity and have high requirements for energy quality; therefore, it is necessary to configure distributed energy storage. Based on this, a planning model of industrial and commercial user-side energy storage considering uncertainty and multi-market joint operation is proposed.

What is commercial and industrial energy storage?

Commercial and Industrial energy storage is one of the main types of user-side energy storage systems, which can maximize the self-consumption rate of photovoltaics, reduce the electricity expenses of industrial and commercial owners, and help enterprises save energy and reduce emissions.

How to plan industrial and commercial user-side energy storage (ICUs-es)?

When planning the industrial and commercial user-side energy storage (ICUS-ES) system, it is necessary to comprehensively consider the economy and environment of the system. Thus, it can ensure that the planning results of industrial and commercial user-side energy storage are more in line with the actual situation.
