

Pure electricity requires outdoor power supply

How many types of power supply does pure electric construction machinery have?

Pure electric construction machinery has four types of power supply. The core components of the power unit of the pure electric drive system are energy storage unit and electric motor. Key technologies of the pure electric drive system applied to pure electric construction machinery are discussed.

What are the core components of pure electric drive system?

The core components of the power unit of the pure electric drive system are ESU and EM. Based on the working characteristics and operation mode of CM, higher requirements are made for them.

What is a pure electric drive system?

The pure electric drive system which adopts EMs to substitute the engine to drive the hydraulic pump or directly drive actuators can realize real zero-emission and improve the energy efficiency, and it paved the way for the intelligent development of CM. The PECMs address the issue of emissions.

What are the advantages and disadvantages of a pure electric drive?

7.4. Safety and reliability Compared with traditional fuel oil drive technology, the pure electric drive has incomparable advantages, but it also brings other problems. High temperature, greater than 10 g vibration and high voltage are the main factors affecting the safety and reliability of PECM.

Are pure electric drive systems better than EVs?

Although the pure electric drive system is widely used in industry and some technologies have been successfully applied to EVs, there are a few pure electric drive systems developed for CMs. The study on the powertrain of PECMs is less compared with that of EVs.

What type of battery is used in a pure electric drive system?

Considering the energy density requirement of the pure electric drive system and the charging speed requirement under energy recovery condition, a high-power lead-acid battery was adopted as the ESU for this model. The battery capacity is 300 V, 210 Ah. A 40-kW asynchronous motor was adopted to drive the pumps.
