The power supply's output voltage is adjusted by R5, the small 1K pot located on the circuit board that goes to pin 4 (the inverting input to the voltage comparator). To make the power supply adjustable, you first need to break the connection between pin 5 and pin 6. You will have to cut the small foil jumper the pads next to pin 5 and pin 6.

My \$0.02. Use a relay and use the corner lights power wire as the trigger to turn on the foglamps. Alternatively you could also tap the headlight power to do the same. Power the foglamps at the fuse box power terminal. I ...

RAV4 Overland Build, Overlanding has become a popular outdoor activity that combines adventure travel with self-reliance. It involves traveling long distances across varied terrains, often in 4x4 vehicles, and staying self-sufficient with camping gear and supplies.

Thank you for the responses. I agree with Carnivore. It's actually preferable that the power supply is cut off along with the removal of the key because accidental battery drainage is prevented. I had a car once with continuous 12V power supply and I thought it was a bad idea. The RAV4's power supply set up is more practical.
