

Russian cylindrical lithium battery

What are Russian batteries made of?

Their key component is a battery made from nickel, cobalt, manganese, copper, aluminum, and, of course, lithium-- metals that are now called 'battery metals.' Russia is fully self-sufficient in nickel, cobalt, copper, and aluminum; manganese is imported from several sources, and only lithium is yet a major concern.

Will Russia build a lithium battery factory in 2025?

Russian nuclear energy giant Rosatom has acquired a 49% stake in Enertech International, a South Korean lithium-ion battery specialist, and has announced plans to build a gigafactory at an unspecified location in Russia. The start of production is scheduled for 2025.

How much lithium does Russia have?

Based on these estimates, Russia already ranks 5th among countries in lithium reserves, at the level of China (6.8 million tons) and Australia (7.9 million tons), which are among the top three in its production (Jasinsk S.M., 2023). Mostly all lithium in Russia should be in hydromineral resources.

Where is the world's largest lithium-ion battery plant located?

The world's largest lithium-ion battery plant, a joint venture between the Chinese lithium battery manufacturer Thunder Sky Group and Russian state-run agency RUSNANO, was recently opened in Novosibirsk, Russia.

Why is lithium a problem in Russia?

Lithium is not mined in Russia, so self-sufficiency in this metal is a problem, dealing with which is high on the agenda. High demand for lithium is a global trend driven by the rapid development of electric vehicles, primarily in China. Supply cannot yet catch up with demand.

Is there a domestic demand for lithium in Russia?

There are plans to set up domestic production. "Accelerated development of lithium ore mining projects at the Zavitinskoye, Polmostundrovskoye, Kovyktinskoye, Yarakhtinskoye and Kolmozerskoye deposits in 2023-2030 will help meet most of domestic demand for lithium," says the Russian Metals Industry Development Strategy 2030 adopted last December.
