What are lithium iron phosphate (LiFePO₄) batteries?

Lithium iron phosphate (LiFePO₄) batteries are known for their high safety, long cycle life, and excellent thermal stability. They come in three main cell types: cylindrical, prismatic, and pouch. Each of these types has distinct characteristics that make them suitable for various applications.

What is a lithium iron phosphate battery?

Lithium iron phosphate battery, commonly known as LiFePO₄ Battery or LFP Battery. Lithium iron phosphate battery (lifepo₄ battery cell) is a lithium-ion battery using lithium iron phosphate as the cathode material and carbon as the negative electrode material, with a single cell rated at 3.2V and a charging cut-off voltage of 3.6V~3.65V.

What is a cylinder LiFePO₄ battery?

Cylindrical LiFePO₄ Cells Cylindrical LiFePO₄ cells are the most commonly used type of lithium iron phosphate batteries. They resemble the shape of traditional AA or AAA batteries and are widely employed in applications where high power and durability are essential.

What is a cylindrical lithium ion battery?

Cylindrical cells are one of the most widely used lithium ion battery shapes due to ease of use and good mechanical stability. The tubular cylindrical shape can withstand high internal pressures without collapsing. Melasta produces multiple sizes and capacities according to the customer requirement.

Why should you choose a cylindrical LiFePO₄ battery?

Long Cycle Life: These cells can endure thousands of charge and discharge cycles, providing a long lifespan, which is crucial for applications like electric vehicles and solar energy storage. **High Safety:** Compared to other lithium-ion batteries, cylindrical LiFePO₄ cells are less prone to overheating or catching fire.

What are the different types of LiFePO₄ battery cells?

Kinstar offers two types of LiFePO₄ (LFP) battery cells - cylindrical and prismatic. Both provide reliable and sustained power for high power applications. Standard cylindrical cell models such as 18650, 26650, 32650, 38120... Prismatic cells are similar to Li-Polymer cells, they can be developed to various flexible sizes.
