

Small solar light split lighting

What is a split-type solar street light?

The Split-type solar street light is composed of the solar panels(including bracket),lamp head,control box (with the controller,battery,etc.) and lamp pole,foundation,etc. Split-type Solar street lamps generally form their own power supply system and are not connected with the grid network.

What is split lighting in photography?

In photography,split lighting is a lighting technique where the light reaches the subject at a 90-degree angle,creating a straight line down the middle of the subject's face with one side wholly bright and the other completely dark. This is an excellent choice for a dramatic portrait,particularly when using hard light instead of soft.

What is PV solar street LED light?

PV solar street led light is the general name of split solar street light,which can use any existing street light head of ZGSM.

How to use split light?

Check how the light falls on the face. Move the light or your model until you manage to have exactly half face in the light and half in the shadows. You can start practicing this split lighting scheme without investing anything in extra gear. You can use natural light.

How do solar street lights work?

Convert solar energy into electricity to drive LED street lamps to work. Solar energy is inexhaustible. Solar street lights are powered by 12-36V solar panels,which are within the safe voltage range and will not cause electric shock accidents to people,making them safer to use.

What are the different types of solar street lamps?

There are two kinds of solar street lamp system: 12V and 24V. Solar cells convert solar energy into electricity. There are three kinds of more practical solar cells: monocrystalline silicon, polycrystalline silicon, and amorphous silicon.
