What is the SD of a novel cooling system in Guangzhou?

In Guangzhou, the SD of the novel, rack-level, and room-level cooling systems are 14.1 kW h, 188.1 kW h, and 119.7 kW h, respectively. The energy consumption fluctuation of the novel system equipped with the energy storage module is low, which benefits the power grid stability. (28) $SD = \frac{1}{n} \sum_{i=1}^n (y_i - \bar{y})^2 n - 1$

What is the COP of a liquid cooling module?

The liquid cooling module with the multi-mode condenser can utilize the natural cold source. The Carnot battery module can recover liquid cooling module waste heat and realize efficient energy storage. The main conclusions are as follows: When the outdoor temperature is $-10 \sim 30 \text{ }^\circ\text{C}$, the COP of the liquid cooling module is 45~25.

Can data center cooling and energy storage meet current electricity pricing policies?

Continuous power and cooling requirements of data center make it difficult for conventional energy management systems to meet the current electricity pricing policies. In this study, a system for data center cooling and energy storage is proposed. The system combines the liquid cooling technology with the Carnot battery energy storage technology.
