What are supercapacitors & EDLC capacitors?

Supercapacitors are also known as ultracapacitors and Electric Double Layer Capacitors(EDLC). These types of capacitors have higher capacitance values than other capacitor types available today. Some EDLC capacitance values can reach up to 4000F in a single standard case size,such as Nichicon's JJD0E408MSEGBN.

A capacitor's state-of-charge is easily measured: it is proportion to voltage. In contrast, measuring a battery's state of-charge can be difficult. The energy stored in a capacitor is:  $E = \frac{1}{2} CV^2$  Eq.2 E is the energy in joules. The power drawn from a capacitor during discharge depends on the capacitor's voltage and the electrical current:
