Our commercial and industrial energy storage solutions offer from 30kW to 30+MW. We have delivered hundreds of projects covering most of the commercial applications such as demand charge management, PV self-consumption and back-up power, fuel saving solutions, micro-grid and off-grid options.

Off-grid Use. Energy storage systems can enable off-grid applications to operate 24*7 when paired with renewable energy. The energy storage system must be sized well to include battery degradation year by year, maintain a healthy depth of discharge (DoD), and allow for auxiliary power consumption (including the cooling system and other components that ...

Even a single high peak load per year can be very expensive. Commercial and industrial clients pay the grid operator a specific demand fee for their highest peak load throughout the year. The peak load can be capped at the grid connection point by using power from the battery storage system. This brings down the grid connection fee.

Battery system: The battery, consisting of separate cells that transform chemical energy into electrical energy, is undoubtedly the heart of commercial energy storage systems. The cells are arranged in modules, racks, and strings, as well as connected in series or parallel to an amount that matches the desired voltage and capacity.
