What is a flow field in a battery?

Flow field is a crucial component of flow batteries which distributes the electrolyte to the electrode and acts as a medium for conducting electrons. It also maintains uniform current and potential distribution at the electrodes.

To improve the operation efficiency of a vanadium redox flow battery (VRB) system, flow rate, which is an important factor that affects the operation efficiency of VRB, must be considered. The existing VRB model does not reflect the coupling effect of flow rate and ion diffusion and cannot fully reflect the operation characteristics of the VRB system.
