Electricity fuels economies, powers businesses, and changes lives. But in parts of Africa, keeping the lights on is still a daily struggle. Businesses shut down, hospitals rely on generators, and economic growth is stifled by power instability. While some African nations have built resilient power grids, others remain trapped in a cycle of outages.

West Africa has significant energy resources. The region accounts for about one-third of African gas and oil reserves and over 23,000 Megawatt (MW) of technically exploitable hydropower capacity. However, a key challenge has been distribution: the major sources of electricity supply are located far away from the main centers of consumption. The West Africa ...
