What was Uruguay's primary energy source in the 1940s?

Since the 1940s, Uruguay's power had come from a mix of hydroelectric dams and oil-fired thermal plants. As the country grew throughout the 1990s and 2000s, it delayed plans for developing new energy sources and became increasingly reliant on its thermal plants, all but yoking the country's economy to unstable commodity prices.

What is the benefit of unused energy in Uruguay?

In Uruguay, unused energy sometimes cost the utility as much as \$90 million a year, according to officials. But it also allowed them to stabilize the grid and, according to the energy think tank Ember, accomplish something no country besides Denmark and Luxembourg has: shoot beyond 40 percent for wind and solar.

Why does Uruguay generate a surplus of electricity?

Typically, Uruguay generates a surplus of electricity due to an excess of wind-power capacity. The country seeks to identify additional domestic uses for excess electricity and potentially increase exports to Argentina and Brazil.

Will Uruguay become a leading country in the development of E-Fuels?

Due to its highly decarbonized energy sector with strong wind and solar capacity, Uruguay is expected to become a leading country in the region in the development of e-fuels, or synthetic fuels that are produced using renewable energy.

How much electricity does Uruguay generate?

According to 2022 data from MIEM, Uruguay generated 14,759 GWh of electricity, 13,343 GWh for internal demand and exported 1,416 GWh to Brazil and Argentina. Typically, Uruguay generates a surplus of electricity due to an excess of wind-power capacity.

How much electricity did Uruguay export in 2022?

In 2022, exports of electricity represented \$222 million, which was less than 50 percent of the total amount of electricity exported in 2021. This decrease was primarily due to a severe drought which adversely affected the generation in Uruguay.
